Thank you for purchasing one of our Nomad Coolers!

You will enjoy many years of use if you follow these simple instructions below:

To enable you to get the very best results from your Cool box, chill it down with ice, gel packs or just frozen food at least 12 hours before you want to use it. Best results are naturally obtained by using ice. This is the same procedure that you would use with a new fridge/freezer by switching it on first before filling.

Once your box has been chilled down, put in one of our 1000g gel packs per 20 litres of capacity. We recommend our gel packs which are a medical grade product rather than ice packs with refrigerant water which do not perform as well. Cold air sinks so your gel packs ideally need to go on the top. Solid mass holds the cold longer than air. So it is important to keep your cooler filled with solid mass, for longevity of cooling time. Therefore, if your cooler is only half full you will need to keep it topped up as fresh air will not hold the cold. This can be done by adding extra gel packs, or filling with extra provisions. E.g. if you only have your cooler half-filled it will not hold the cold for the same length of time as if it was full of cold product.

When you have finished using your box, rinse out with warm soapy water let it dry and put away for next time you need to use it. Our Cool Ice boxes do not hold odours or stains if these recommendations are followed.

Once or twice a year smear a film of Vaseline on the black seal around the inside lid. This helps to keep the seal soft and helps to prolong the cooling process and life of the seal.

Also remember, if pre-warmed your box can keep food hot too!

If you have any questions over the use of your Cool Box, please contact us;
